SUMMARY

Software Engineer with strong skills in HTML, CSS, JavaScript, C#, and SQL, and a solid foundation in OOP and Data Structures & Algorithms. Experienced in developing responsive and user-friendly interfaces with a focus on UI/UX principles. Able to apply problem-solving and logical thinking to build efficient and practical software solutions, with a keen interest in learning and growing in a professional environment.

EDUCATION

Bahria University Karachi Campus	Sep 2024 - Present
Bachelor's Degree in Software Engineering	
Aptech Learning, Shahrah-e-Faisal Center	August 2023 - Sept 2024
ACCP 2.0: Web Design and Development	

PROJECTS

Productivity Dashboard – MIPS Assembly Project

- Developed a console-based productivity dashboard using MIPS Assembly (low-level programming)
- Implemented features including To-Do list with priorities, notes system, Pomodoro timer, and habit tracker
- Designed a full menu-driven interface using direct memory and register-level operations
- Managed data manually without high-level libraries or built-in data structures

Algo-Puzzle Board

- Developed the projects demonstrating implementation of key Data Structures and Algorithms
- Implemented algorithms including Dijkstra, Kruskal, DFS, linear search, quick sort, and many more
- Focused on optimizing time complexity and improving algorithm efficiency through practical application

Requira – Smart Requirement Gathering System

- Developed a TypeScript + AI-based system for smart requirement elicitation.
- Built an interactive UI to convert user input into structured software requirements.
- Categorized functional and non-functional requirements to improve clarity.
- Focused on clean UI, modular code, and real-world workflow simulation.

Decode and Discover

- Developed a C# project to demonstrate OOP principles
- Implemented classes, inheritance, encapsulation, and basic logic handling
- Focused on clean code structure and problem-solving

Vampire Epidemic – Desktop-Based Game

- Developed a C# desktop game to demonstrate core programming concepts
- Implemented game logic and character interactions using OOP principles
- Designed a simple survival-based scenario with clean code organization

SKILLS

- | | | |
|-------------------------|-------------------------------|--------------------------|
| • C# | • UI/UX | • Apache NetBeans |
| • Java | • Figma | • MS Office |
| • SQL Server | • Git & GitHub | • Strong Problem Solving |
| • HTML | • Object Oriented Programming | • Time Management |
| • CSS | • VS Code | • Team collaboration |
| • JavaScript | • Visual Studio | • Good communication |
| • Bootstrap (framework) | | • Critical Thinking |
